SUMMARY

Software Engineer with experience in delivering polished, production-ready web and mobile applications.

EDUCATION

University of California, Santa Cruz

September 2024 - June 2026

B.S. in Computer Science

Relevant Courses: Machine Learning, Computer Systems and C Programming, Computer Architecture, Algorithm Analysis, Computer System Design, Software Engineering

Ohlone College

August 2021 - June 2024

A.S. in Computer Science | A.S. in Mathematics

EXPERIENCE

Software Engineer / Web Developer, Baskin Engineering UCSC

June 2025 - Present

- Deployed a full-stack booking platform using React, TypeScript, Python, and Firebase, supporting over 100 prospective students and counselors per quarter.
- Replaced a manual scheduling workflow with an automated system integrated with Firebase and Google Calendar APIs, reducing scheduling coordination time by ~60–70%.
- Developed an admin dashboard used by 10–15 student ambassadors/staff to manage bookings, scheduling, tours, and staff information/availability.
- Implemented Firebase Authentication and Firestore, handling real-time updates for bookings and user data with improved reliability and reduced manual errors.

DevOps Intern, Lawrence Livermore National Laboratory (LLNL)

June 2024 - August 2024

- Developed an AI-powered chatbot web application using Python, Gradio, and PaperQA, enabling 50–100 internal users to upload documents and retrieve cited responses.
- Integrated OpenShift OAuth-based authentication, improving system security and controlled internal access.
- Implemented persistent chat history, enabling users to save and resume conversations across sessions.
- Containerized and deployed the web application using Docker, OpenShift, and GitLab CI/CD, reducing deployment/setup time by ~40%.
- Collaborated in a Linux-based environment, contributing to a team project delivered within 10-weeks.

SOFTWARE PROJECTS

Financial Compliance System (TypeScript, React, Node.js)

- Developed a full-stack system to process and filter financial transaction data, supporting hundreds of records per batch.
- Built file upload pipelines and implemented rule-based detection logic to flag suspicious transactions.
- Designed dashboards for reviewing approved vs. flagged data, improving audit workflow efficiency.
- Focused on scalable API design and structured data modeling for financial datasets.

ChariWork (React, TypeScript, Node.js)

- Co-developed a full-stack web application enabling users to link bank accounts and automate micro-donations.
- Implemented Plaid OAuth authentication for secure bank integration and token exchange.
- Built a transaction pipeline handling dozens of transactions per session to calculate round-ups and trigger donations.
- Integrated Every.org API for dynamic charity selection and automated donation workflows.

TECHNICAL SKILLS & CERTIFICATIONS

Languages: Python, TypeScript, JavaScript, Java, C/C++, Bash, MIPS Assembly

Frontend: React, HTML, CSS, Tailwind CSS, Material UI

Backend & Databases: Node.js, Firebase, PostgreSQL (Neon), REST APIs

DevOps & Cloud: AWS, Docker, Kubernetes, OpenShift, OpenAPI

Tools: Git, GitLab, Linux, VS Code

Certifications: AWS Certified Cloud Practitioner
